No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                   S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid molecule encoding a Mechanically Induced Vascular Receptor (MIVR)-1 polypeptide having C cardiac cell anti-apoptotic activity and fragments of it provided they are not identical to Genbank sequences A1761441.1 A1594390, NM 004338 and AQ177461. Also included are expression vectors, host cells, the MIVR-1 polypeptide, MIVR-1 binding peptides, modulators of MIVR-1, contacting a molecule having cardiac cell anti-apoptotic activity with a candidate agent, where the molecule is a nucleic acid molecule comprising MIVR-1, IRX-1, VDUP-1, BTG-2 and TIS-11d or its expression product, determining if the anti-apoptotic activity is modulated and thereby identifying a modulator. The cardiac cell anti- apoptotic molecules and nucleic acids of the invention are useful for treating, diagnosing and monitoring to the invention of such diseases and disorders as characterised by increased apoptotic cell-death of vascular endothelial cells e.g. cardiac hypertrophy, myocardial infarction, stroke, arteriosclerosis and heart of failure. The present sequence encodes human MIVR-1
                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                       CC hereditary or sporadic nature of the cancer is determined by a method CC comprising: (a) obtaining a sample from the individual having contracted CC cancer, the sample comprising gene expression products, the presence and/or amount of which forms a pattern that is indicative of the cancer; (C) determining the presence and/or amount of the cancer; (C) determining the pattern, and obtaining an indication of the cancer; (C) determining the pattern, and obtaining an indication of the cancer; (C) in the individual based on step (b). At least one or two of the cancer in the individual based on step (b). At least one or two of the cancer in the individual based on step (b). At least one or two of the cancer cexpression products forming a pattern used to determine the cancer care selected individually from any of the 134 genes comprising 367-7850 (c) by (AEB22706 to AEB22839), given in the specification. Also included are: a cell; a method for producing antibodies against an expression product of a cell; a method for producing antibodies against an expression product of a cell from a biological tissue, pharmaceutical composition, for creating a classified cancer, comprising at least one marker one antibody, at least one polypeptide, or at least one mucleic acid and/or probe; and an assay, for classification of cancer in an individual having contracted cancer. Comprising at least one marker capable of determining the microsatellite status in a sample and at least one marker in a sample determining the composition of cancer in an individual. The method above is useful for producing an assay for classifying cancer in animal tissue. The method is composition for the treatment of a cancer in animal tissue. The method is useful for classifying the contracted contracted in a sample and an according to the contracted of a cancer in animal tissue.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method of classifying the cancer in an individual having contracted cancer, which comprises determining the microsatellite status of the tumor. The microsatellite status or the
                                                                                                                                                               useful for classifying the cancer in an individual having contracted cancer, i.e. colon cancer, e.g. an adenocarcinoma, a carcinoma, a teratoma, a sarcoma, and/or a lymphoma. The present sequence represents colon cancer-associated gene used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Classifying the cancer in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                           The invention relates to human tumour-associated antigenic target (TAT) copypeptides, and their related nucleic acids. The TAT polypeptides are coverexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and polypeptide polypeptides; expression vectors and host cells comprising a TAT nucleic acid, an antibody specific for a TAT polypeptide; a peptide or organic molecule which binds to a TAT polypeptide; fusion proteins comprising a TAT nucleic acid, an antibody specific for a TAT polypeptide; are set acids, and the set and methods and compositions for the treatment or antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder across system, melanoma and leukaemia. TAT nucleic acids may further be used as bystem, melanoma and leukaemia. TAT nucleic acids may further be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gene

ACC49493 to ACC49552 encode the human tumour-associated antigenic target (TAT) proteins given in ABP97175 to ABP97234. The present invention describes an isolated antibody that binds to a polypeptide having at least 80 % sequence identity to any of the 60 150-800 residue amino acid sequences (S1), given in ABP97175 to ABP97234, comprising (S1), lacking its associated signal peptide, encoded by any of the 60 2000-3000 base
                                                                                                                                                                       New antibodies against tumor-associated antigenic target polypeptide, useful for treating or diagnosing tumors or cancers in mammals, e.g. prostate cancer, lung cancer, prostate adenocarcinomas or renal cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ACC49552

gene expression signature to diagnose or analyse the autoimmune disease or arthritides in the patient, where gene expression of at least 60% of the genes correlates with that of the gene signature. The invention further comprises: a treatment of rheumatoid arthritis; identification of the comprises of the comprise of
                                                                                                                                                                                                                                    The invention relates to a novel method for diagnosing and analysing autoimmune disease or arthritides. The method comprises obtaining a patient sample containing mRNA, analysing gene expression using the mRNA that results in a gene expression signature of the mRNA, and using that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Diagnosing and analyzing autoimmune disease using gene expression profiles and microarray technology, useful for diagnosing and treating rheumatoid arthritis, lupus, fibrositis, osteoarthritis, fibromyalgia and the state of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             31-OCT-2001; 2001US-0336220P

CC genes for targeting in the treatment of rheumatoid arthritis in a mammal CC other than a mouse; diagnosis of rheumatoid arthritis in a mammal; an CC array or gene chip, specific for rheumatoid arthritis; diagnosis or CC analyses of autoimmune disease or rheumatoid arthritis; screening the CC efficacy of a candidate drug in vitro for the treatment of collagen-CC induced arthritis; and reducing the symptoms associated with collagen-CC induced arthritis; and reducing the symptoms associated with collagen-CC antigout, antiinflammatory, dermatological, antiarthritic, osteopathic, CC antigout, antiinflammatory, dermatological, and immunomodulatory. The CC methods and compositions of the present invention are useful for CC diagnosing and treating autoimmune disease or arthritides, such as CC represents a DNA sequence gout, juvenile rheumatoid arthritis, and an CC immune disease caused by an infectious agent. This polynucleotide contents a DNA sequence relating to the genes used in the analysis and CC treatment of autoimmune diseases or arthritides. Note: This sequence is CC treatment of sequence relating to the genes used in the analysis and contents from in the specification. It has been supplied in an electronic
                                                        from WIPO.

rheumatoid arthritis, lupus, fibrositis, osteoarthritis, fibromyalgia and

English

CC patient sample containing mRNA, analysing gene expression using the mRNA CC that results in a gene expression signature of the mRNA, and using that gene expression signature to diagnose or analyse the autoimmune disease CC or arthritides in the patient, where gene expression of at least 60% of the genes correlates with that of the gene signature. The invention CC further comprises: a treatment of rheumatoid arthritis; identification of Genes for targeting in the treatment of rheumatoid arthritis; in a mammal containing the containing the containing the efficacy of a candidate drug in vitro for the treatment of collagency induced arthritis; and reducing the symptoms associated with collagency induced arthritis; and reducing the symptoms associated with collagency induced arthritis; and reducing the symptoms associated with collagency induced arthritis; and reducing the symptoms associated with collagency antigout, antinfilammatory, dermatological, and immunomodulatory. The compositions of the invention have the following activities and treating autoimmune disease or arthritides, such as rheumatoid arthritis, lupus, antylosing spondylitis, fibrositis, contemparation and infectious agent. This polynucleotide in the analysis and creatment of autoimmune diseases or arthritides. Note: This sequence is not shown in the specification. It has been supplied in an electronic content format from WIPO. disease or relates to a novel method for diagnosing and analysing sease or arthritides. The method comprises obtaining a containing mRNA, analysing gene expression using the mRNA

```
This invention relates to a novel method for identifying genes that are cover-expressed in adipose tissue and as such it provides targets for anti cobesity pharmaceutical compositions. Specifically, it refers to a high combility group I-C protein (HMGI-C) that is associated with obesity and cis epistatic to leptin, furthermore, it refers to the ob gene where an composition of the performing differential gene expression analysis cinvention describes performing differential gene expression analysis cof any two different mice selected from a group consisting of wild-type, compounds that are adipocyte specific, and as such can be used for the differential gene expression analysis contentified that are adipocyte specific, and as such can be used for the differential gadipogenesis, diagnosing and treating diabetes, obesity, compounds that can modulate or prevent adipogenesis and treat diabetes or compounds that can modulate or prevent adipogenesis and treat diabetes or obesity. These compositions exhibit anorectic, antidiabetic and compounds adipocyte specific DNA sequence is a human homologue of a murine adipocyte specific DNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Identifying adipocyte specific genes, useful for treating obesity or diabetes, and for identifying drug targets, by differential gene expression analysis between adipose tissue or stromal vascular tissumice of different genotypes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   29-JUL-2002; 2002US-0398785P.

This invention describes novel cytostatic polynucleotide and polypeptide cor the risk of developing prostatic cancer. Diagnosing prostatic cancer determining over transcription or over expression of the sequences in compositatic tissue. Screening for inhibitors of the sequences in compositatic tissue. Screening for inhibitors of the sequences or detection compositatic tissue. Screening for inhibitors of the sequences or detection compositatic tissue. Screening for inhibitors of the sequences or detection composited that bind are composited that bind are composited to the presence of the sequences in composite that bind are composited that bind are composited to the presence of the sequences in composite that bind are composited to the presence of the presence of the composite that binds that binds that binds to the presence of composite the presence of the sequences of the sequences of the sequences of the sequences of the polypeptide, preferably 300, that binds to the polypeptide; an composite the polypeptide; an antibody (Ab) against the polypeptide, preferably humanised or human; an anti-idiotype, non-human composited that reporter group, cell toxin, immunostimulatory molecules and/or radioisotope. The polymucleotides are identified in human prostatic cancer by differential expression analysis, using DNA microarrays, between normal and tumorous tissues, with (over) expression being detected by quantitative PCR. Analysis of prostatic cancer samples showed that composite the sequentially with anti-human CD4 murine monoclonal antibodies; biotinylated second antibody; streptavidin-conjugated horseradish peroxidase and then diaminobenzidine as colour former (brown). The samples were counterstained with hemalum (blue). Malignant cells stained semples of adenocarcinoma, membrane and cytoplasmic staining was very strong, and colour invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Hinzman, s

                                       This invention describes novel cytostatic polynucleotide and polypeptide cor the risk of developing prostatic cancer. Diagnosing prostatic cancer cor the risk of developing prostatic cancer. Diagnosis is based on content tissue. Screening for inhibitors of the sequences in compostatic tissue. Screening for inhibitors of the sequences or detection compostatic tissue. Screening for inhibitors of the sequences or detection compostatic tissue. Screening for inhibitors of the sequences or detection composted that bind are consumed that bind are composed to the sequence of the consent from antisense oligonucleotides, consent from antisense oligonucleotides, consent from antisense oligonucleotides, short-interfering RNA or riboxymes; an organic molecule of molecular constant the polypeptide; an the polypeptide, preferably 300, that binds to the polypeptide; an explanate against the polypeptide; and the polypeptide, preferably humanised or human; an anti-idiotype, non-human composition antibody directed against Ab or any of the above derivatised with a reporter group, cell toxin, immunostimulatory molecules and/or radioisotope. The polymucleotides are identified in human prostatic cancer by differential expression analysis, using DNA microarrays, between normal and tumorous tissues, with (over)expression being detected by quantitative PCR. Analysis of prostatic cancer samples showed that color young to the above derivatised that constant and then diaminobenzidine as colour former (brown). The sequentially with anti-human CD4 murine monoclonal antibodies; biotinylated second antibody; streptavidin-conjugated horseradish peroxidase and then diaminobenzidine as colour former (brown). The samples of adenocarioma, membrane and cytoplasmic staining was very strong, and colour invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            XXXXXXXX

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              吊
                                            pronchial cancer comprising 489 defined sequences given in the great production. The invention may be useful for the production of compounds with a cytostatic activity through the inhibition of expression or activity of tumour-associated proteins. The novel DNA sequences and the proteins/peptides encoded by them are used for detecting bronchial cancer or determining the risk of developing it and to screen for specific binding partners of the DNA or protein sequences, where the binding partners are potentially useful as agents for treating or diagnosing bronchial cancer. The DNA or protein sequences can also be used for prognosis, detection of metastases and for secondary treatment (of tumours that have been stabilised or are no longer detectable). Ce teacting abnormal expression of the DNA sequences provides early diagnosis of bronchial cancers. The present sequence is that of a novel bronchial cancer-associated human gene sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    04-NOV-2004

. F. B.	New isolated nucleic acid sequence that is expressed by human prostate cancer cells, useful as target for treating, preventing and/or diagnosing cancers, particularly prostate cancer.
S S	im 1; SEQ ID NO 166; 198pp; English.
CC The CC expl	The present invention relates to novel nucleic acid sequences that are expressed by human prostate cancer cells. The nucleic acid sequences or the encoded proteins are useful as targets for treating, preventing and/or diagnosing cancers, particularly prostate cancer. The present sequence is one such nucleic acid of the invention.

The proteins and their coding sequences are useful for treating a disease associated with NF-kappaB activation, such as inflammation, autoimmune diseases, cancers, infectious diseases, bone diseases, AIDS,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New purified protein that activates nuclear factor kappa B (NF-kappaB), useful for treating inflammation, autoimmune diseases, cancers, infectious diseases, bone diseases, AIDS, neurodegenerative diseases or ischemic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nuclear factor kappa B; NF-kappaB; inflammation; autoimmune diseas cancer; infectious disease; bone disease; AIDS; neurodegenerative disease; ischaemic disorder; Antiinflammatory; Immunomodulator; Cytostatic; Antimicrobial; Osteopathic; Anti-HIV; Neuroprotective; Nootropic; Cardiant; Gene therapy; human; gene; d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ADC37326
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nuclear factor kappa B (NF-kappaB)

The invention further comprises:

C proteins and peptides, preferably isolated, that contain a sequence concoded by the novel nucleic acid; and methods for diagnosis and content of pancreatic cancer, using a substance that inhibits or binds to the protein or its DNA, including: an antisense oligonucleotide, short correctly particularly having a malecular weight below 5000, conspand molecule, particularly having a molecular weight below 5000, conspand antibody, preferably human or humanized, that binds to the pancreatic DNA, an aptamer or consocional antibody, preferably human or humanized, that binds to the pancreatic DNA, an aptamer or consocional antibody, any of which may be derivatized with a reporter consocional antibody, any of which may be derivatized with a reporter consocional antibody, any of which may be derivatized with a reporter consocional antibody, and their encoding DNA have cytostatic compound, immunostimulant and/or radioisotope. The novel and/or expression of genes and their encoding DNA have cytostatic consocional pancreatic proteins associated with pancreatic consocional consocional proteins associated with pancreatic consocional consoc
